Rolled Beeswax Tealight Candles Instructions

Materials:

- Smooth beeswax sheets — 1 sheet of inner colour makes 4 candles; 1 sheet of outer colour makes 36 candles
- Wick — HTP83-25 for white; HTP104-25 for light / medium colours; HTP126-25 for dark colours
- Polycarbonate tealight cups

Method:

1. Cut each beeswax sheet into 12 equal strips measuring approximately 5/8" (1.6cm) wide
2. If necessary warm the wax gently with a hairdryer to make it easier to roll, be careful not to overheat. Lay the wick at the end of a strip and fold the wax over it. This is easiest if done on the edge of a table so that the metal wick tab hangs over the side. Using a firm, even pressure, roll the wax along the edge of the table using the overhanging wick tab to guide it evenly. Once the candle is thicker than the wick tab be careful to keep the wax even on the top and bottom of the candle
3. Add a second strip of wax and continue rolling
4. Add a third strip of wax and finish rolling. You should end up with a candle that fits a little loosely in the tealight cup
5. Cut a strip of wax for your outside colour and wrap it around the candle. Note where it meets itself again and cut at the seam – you are only adding a piece of wax that goes round the candle once
6. Gently push the candle into the tealight cup. It should fit snugly. If you haven't rolled it tightly enough it may not fit – if so you can unroll it a bit and cut off a small length of wax

Always stand a burning candle on a safe heat-resistant surface.
Never leave a burning candle unattended or within reach of children.
